HWY-L 13.0008
DATE: February 11, 2013

FROM: HWY-L *Andrew Carnale*

SUBJECT: HMA Mixes Used on Pavement Preventive Maintenance (PPM) Projects

Effective immediately, the recommended surface mix for State Highways PPM projects with lift thicknesses less than two inches will change from State Mix IV to State Mix V. For projects with lift thicknesses two inches or greater, Mix IV will remain as the standard surface mix.

Should the Contractors wish to switch from Mix IV to Mix V on existing PPM projects, a no-cost change order may be issued to accept the use of Mix V. Revised mix designs reflecting the new mix shall be submitted and accepted prior to paving.

If you have any question, please contact JoAnne Nakamura at 832-3405 ext 132 or Eric Shishido at 832-3405 ext 126.
